

**Purpose:** It's usual to hear about extinct animals but these are not many people is aware of the danger for humans with the extinction of plants and their habitat. About the 50% of the plants around the world are in danger of extinction.

The purpose is to make between 4 - 6 short animations which will show plants in museums, walls, cities..etc. and slowly this walls will dissapear and we would see how nature used to be.

### Some Plants in danger:

Apocineas

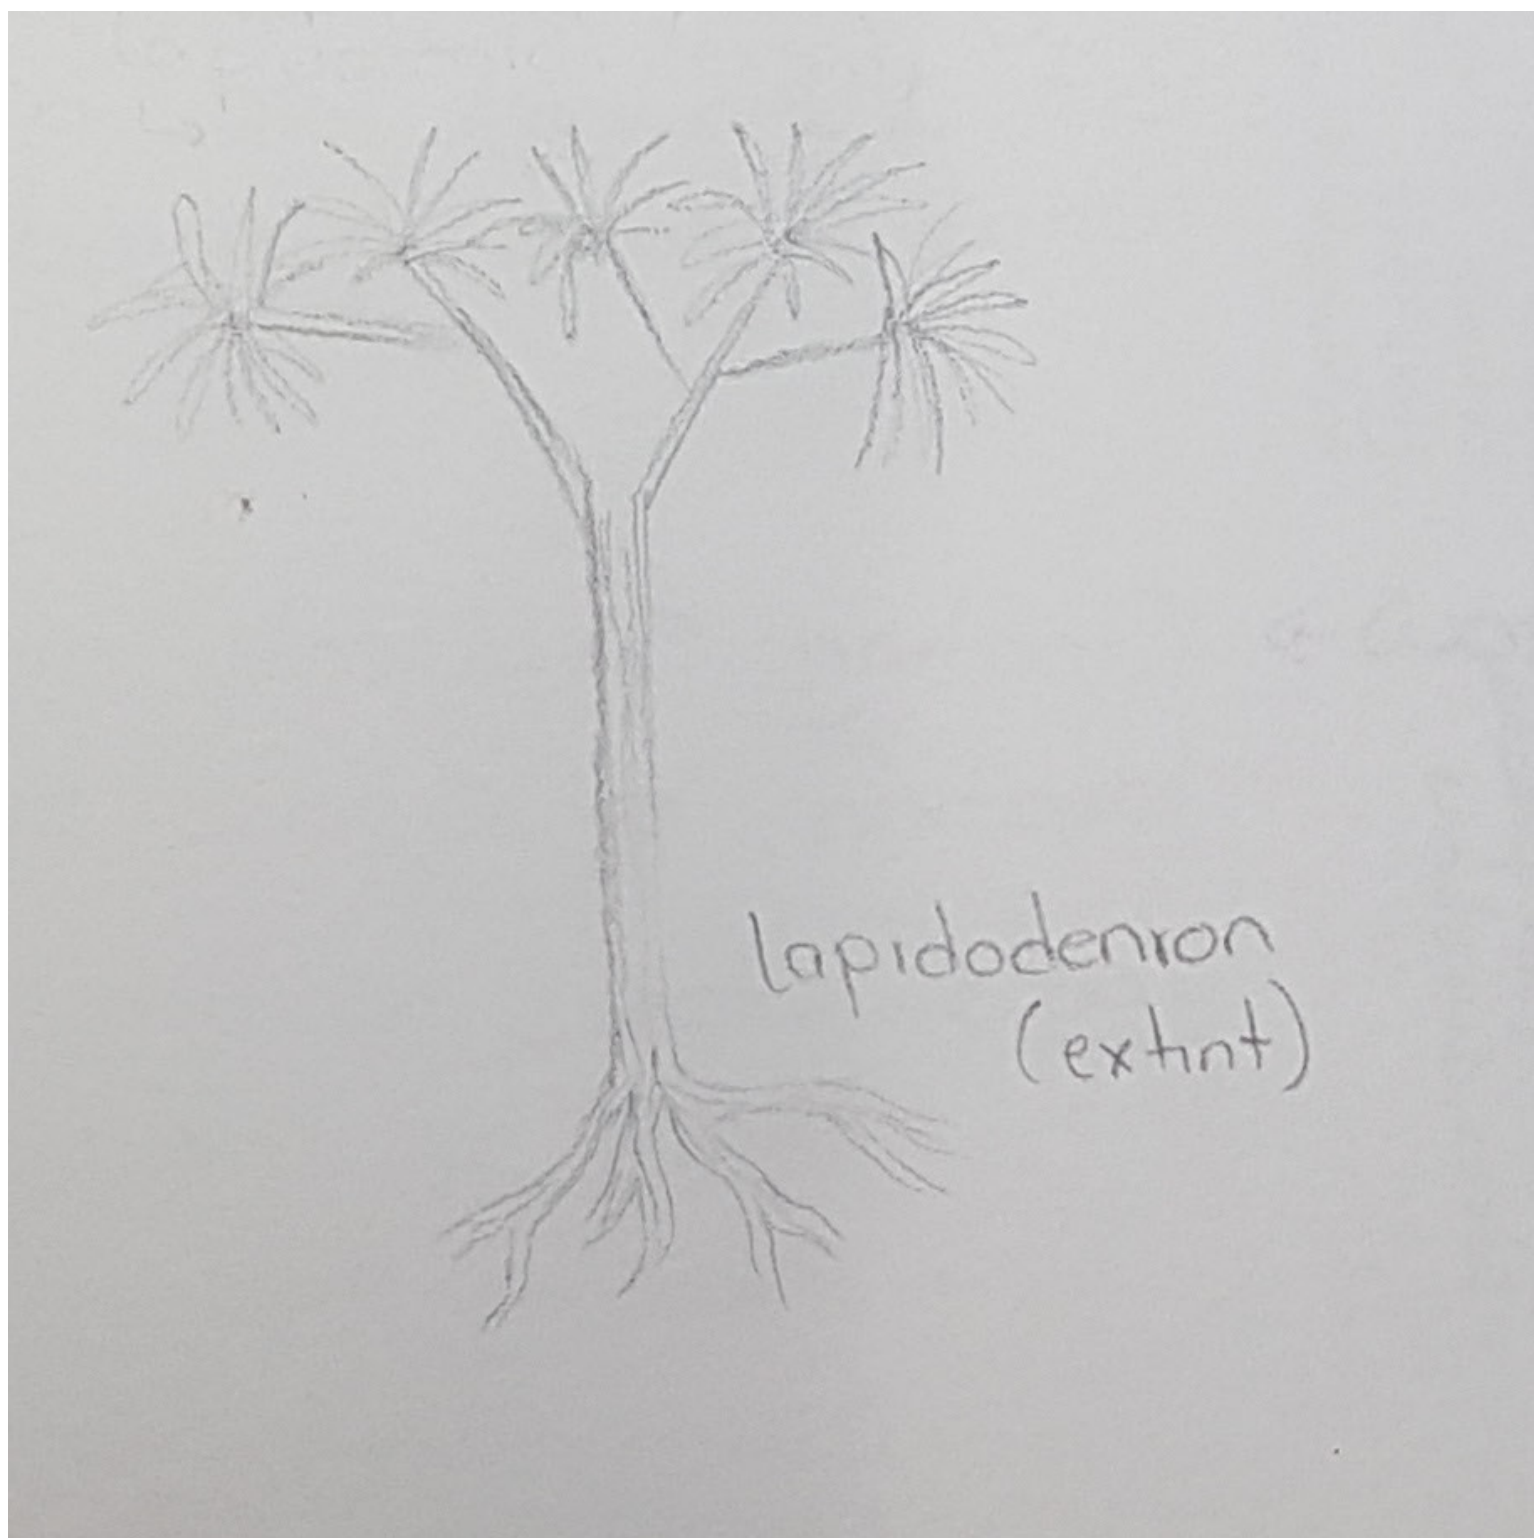

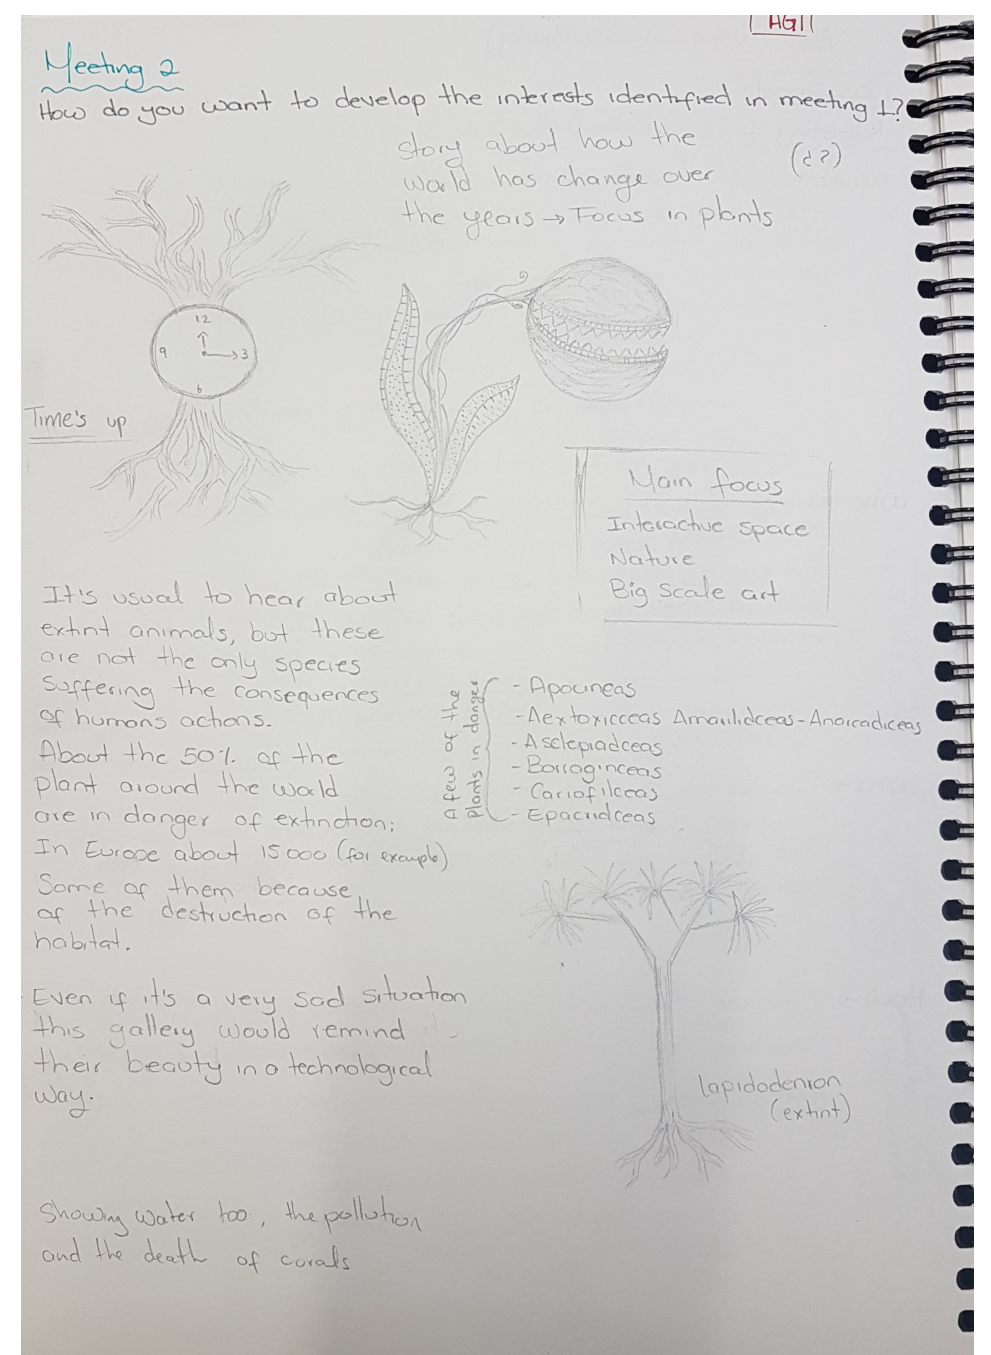

Aextoxcceas Amarildceas

Barranginceas...etc

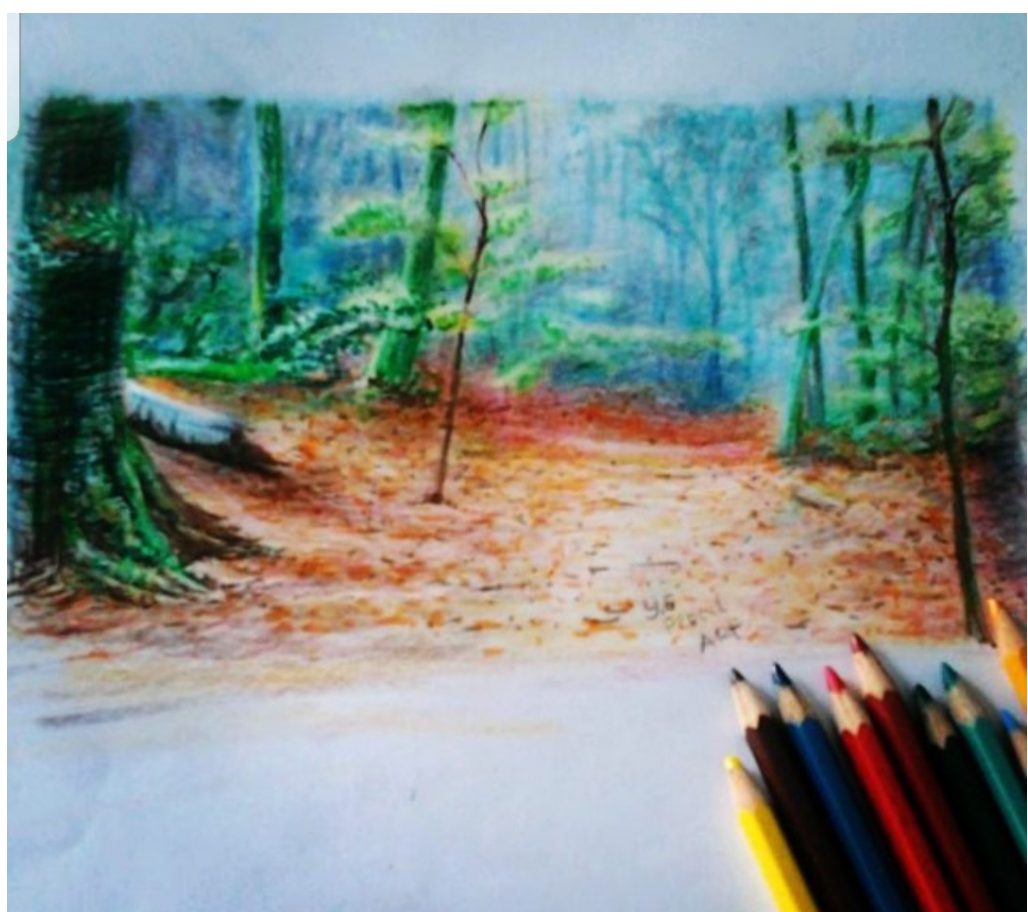

**Self Assessment:** I have no experience animating so this would be a big challenge, but I will do it with after effects.

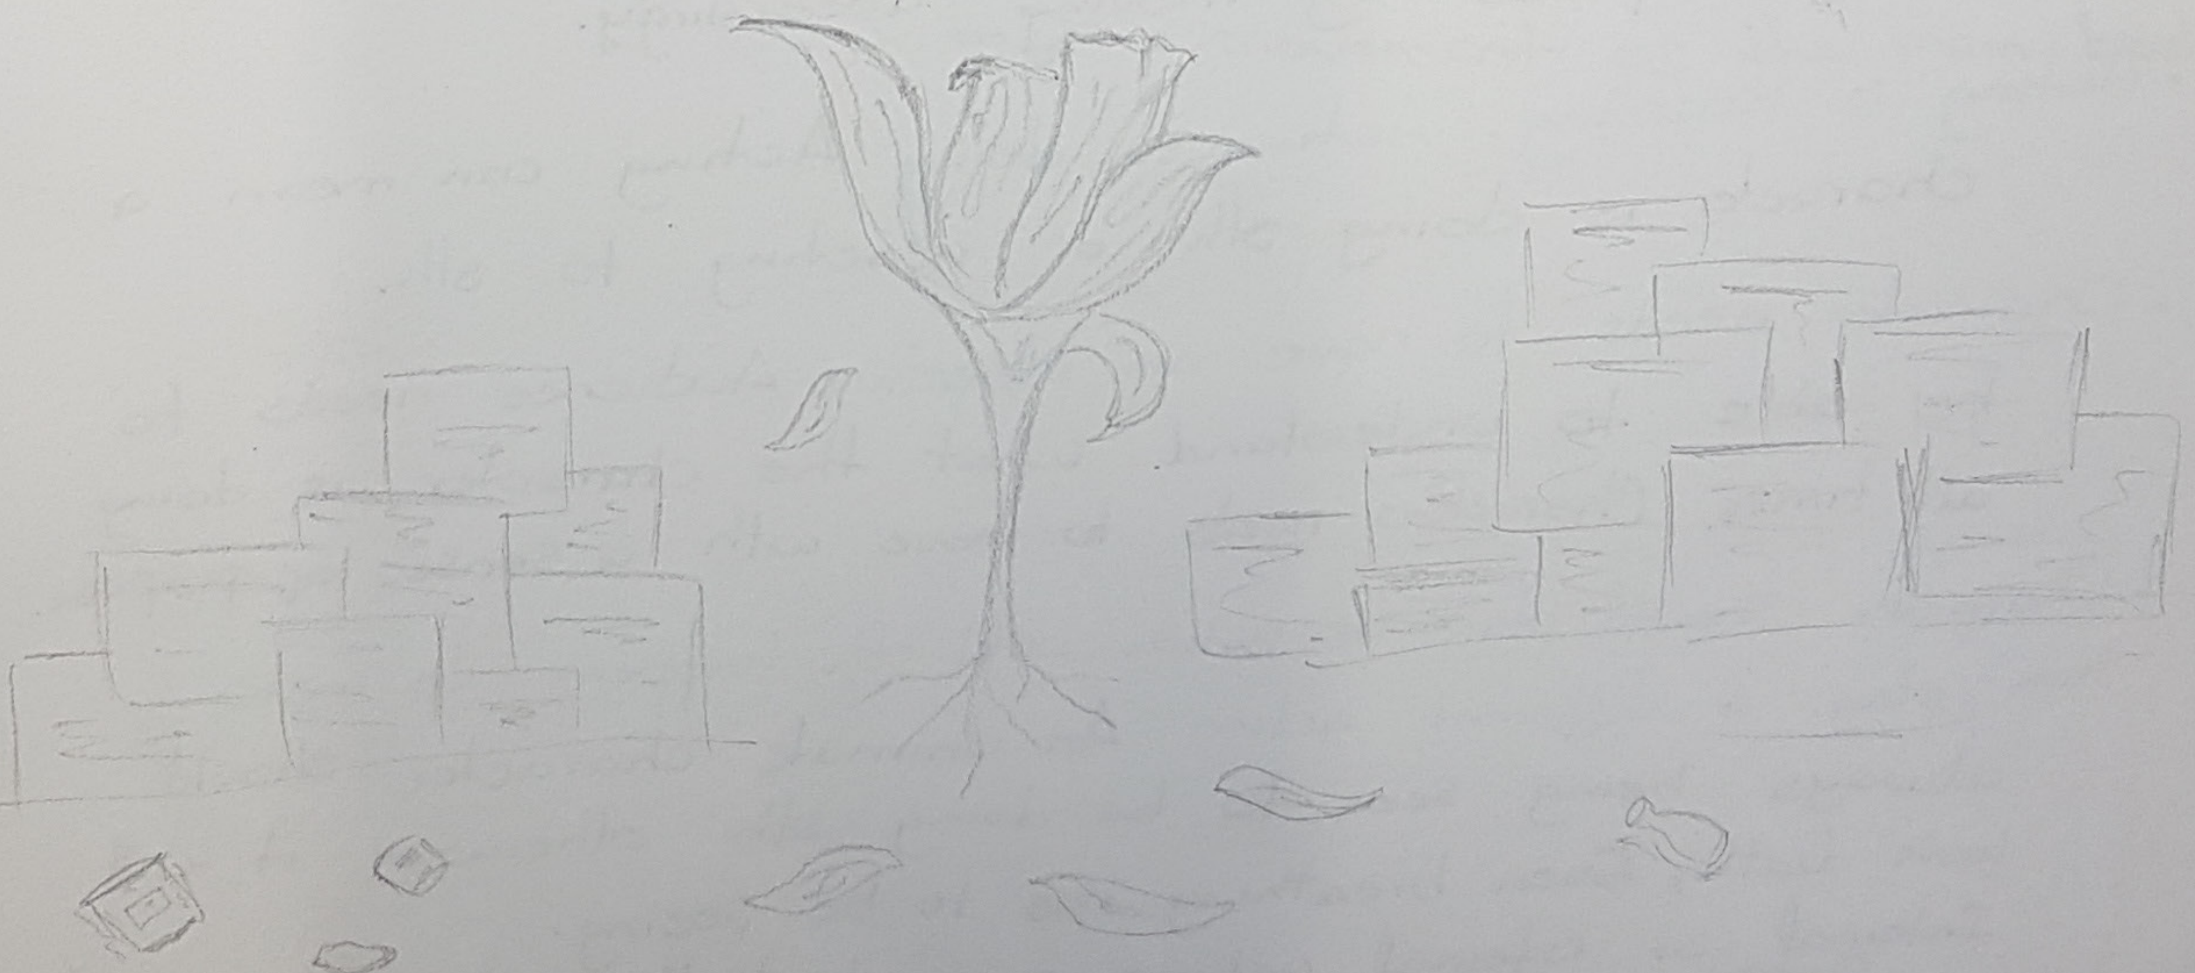

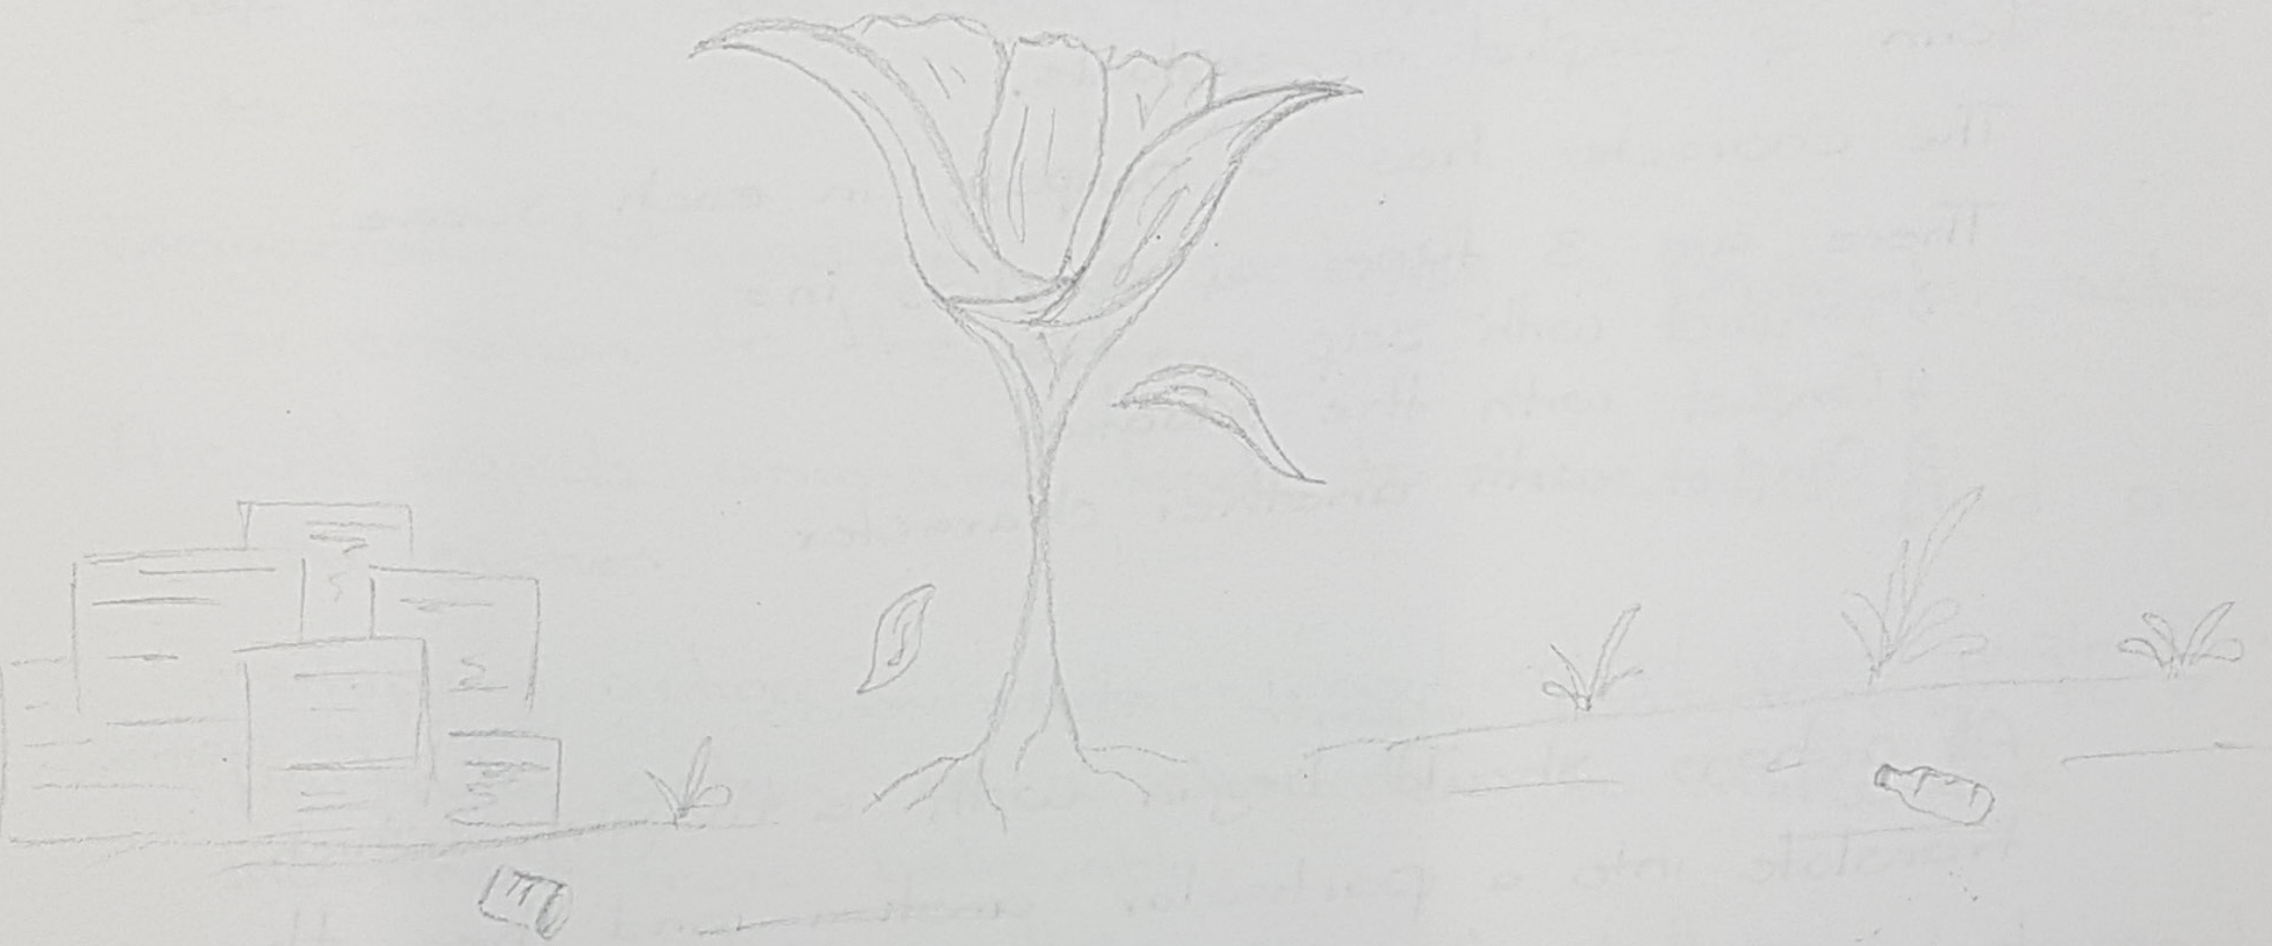

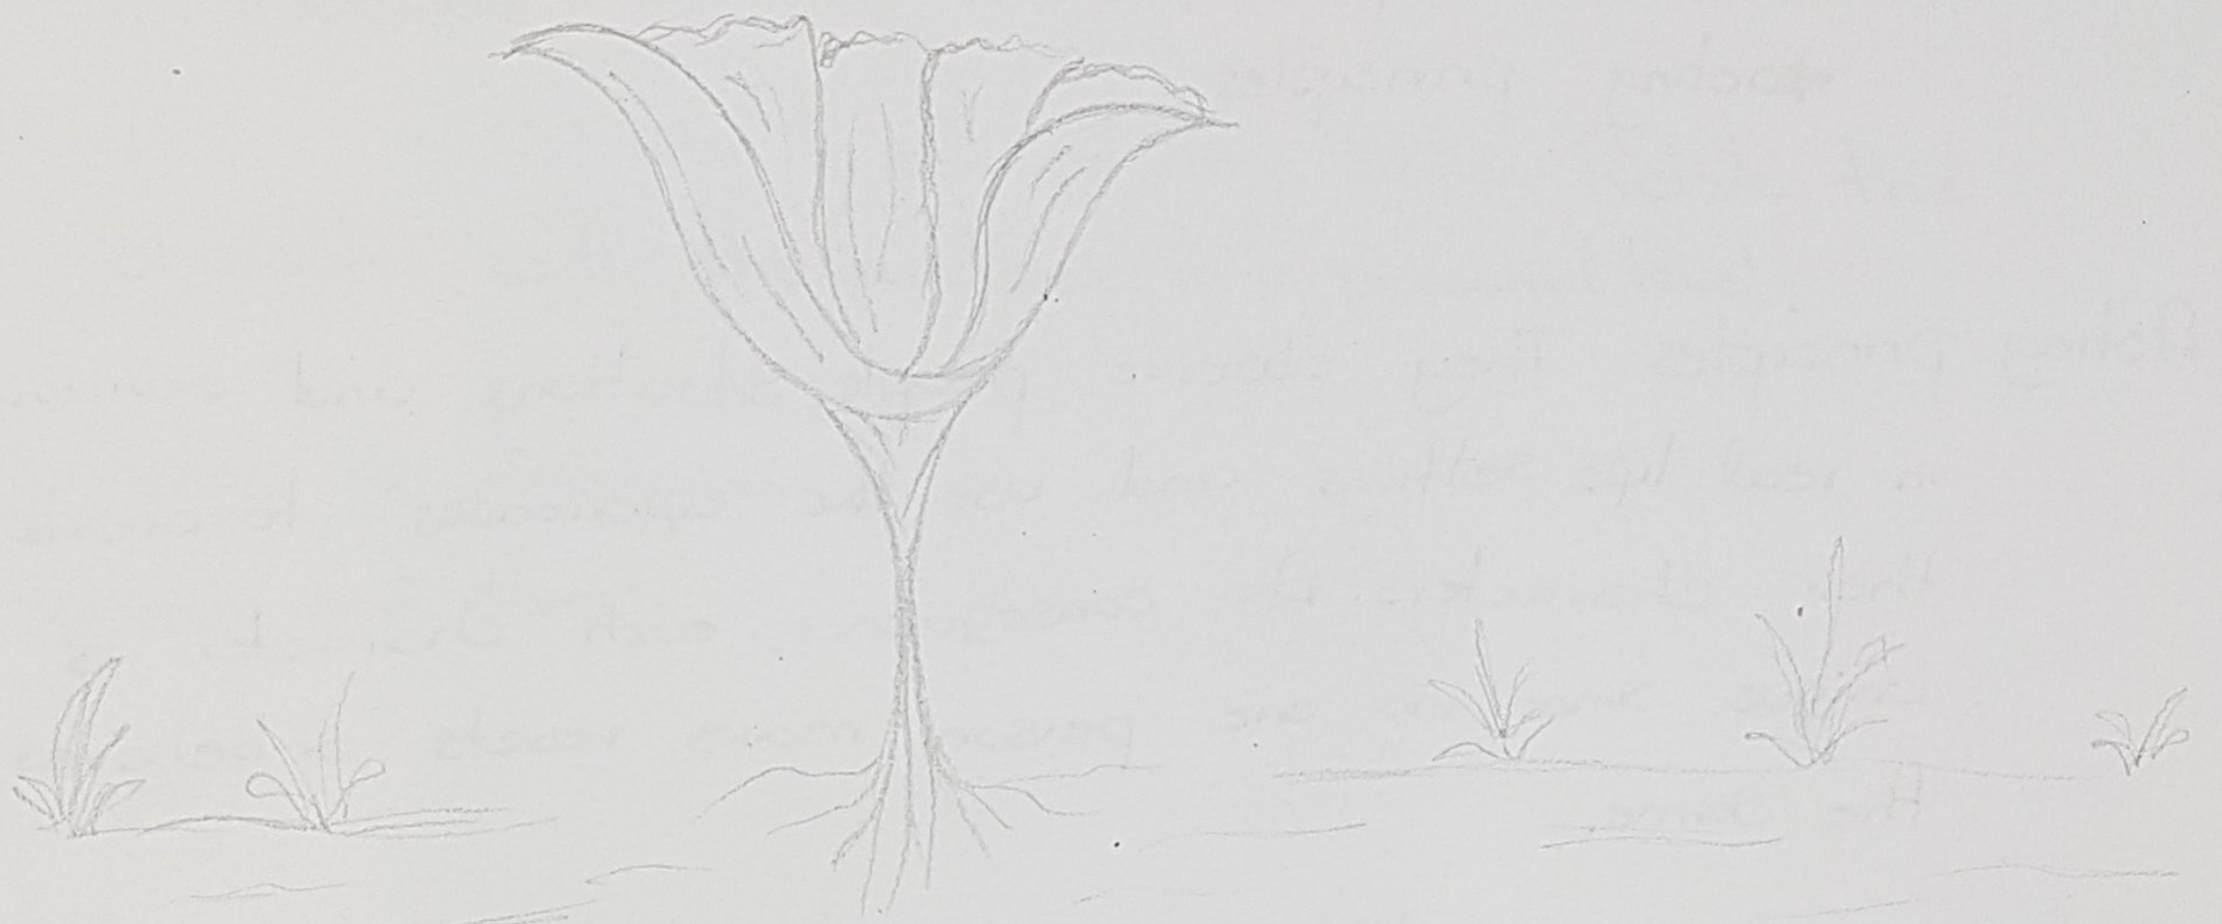

Other challenge is that I can make some drawings but I'm not an illustrator expert

- I'm not sure about which colores tone/style to use. Realistic or more cartoon

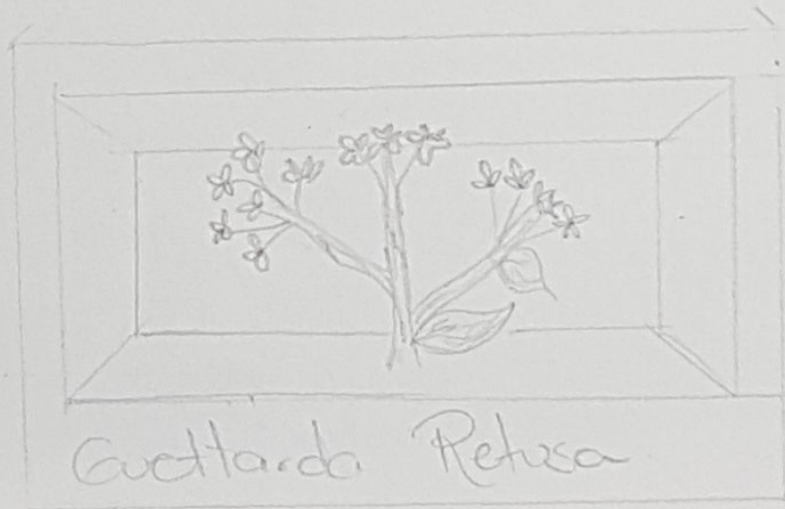

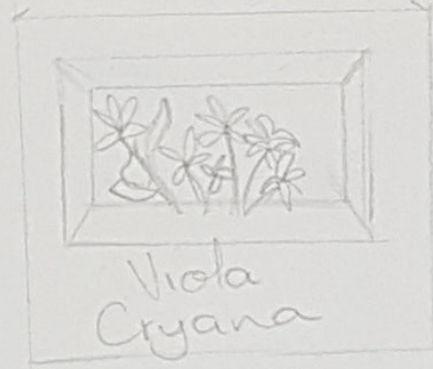

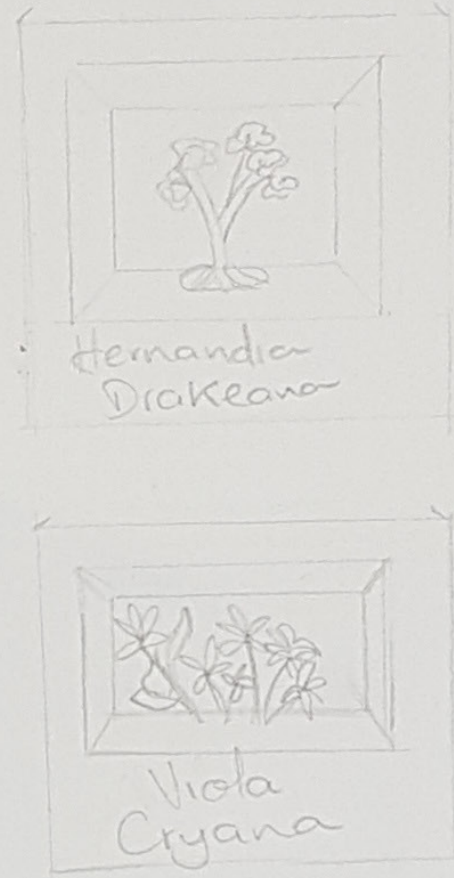

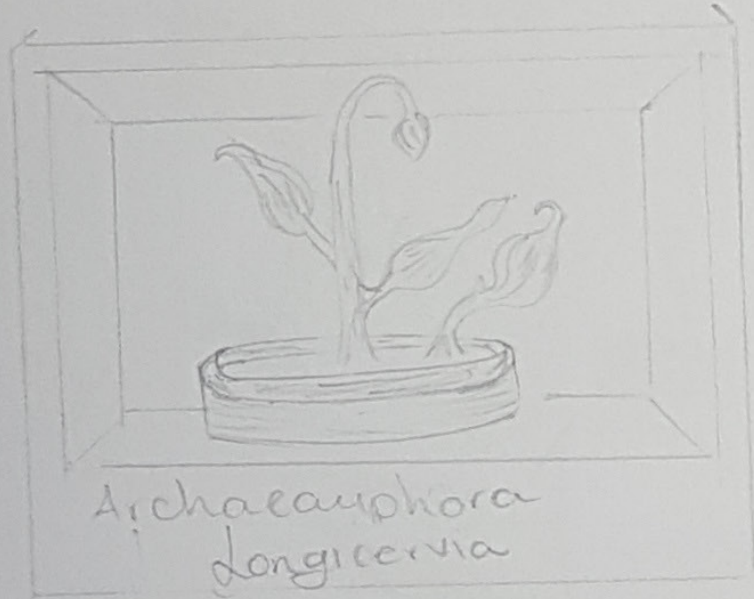

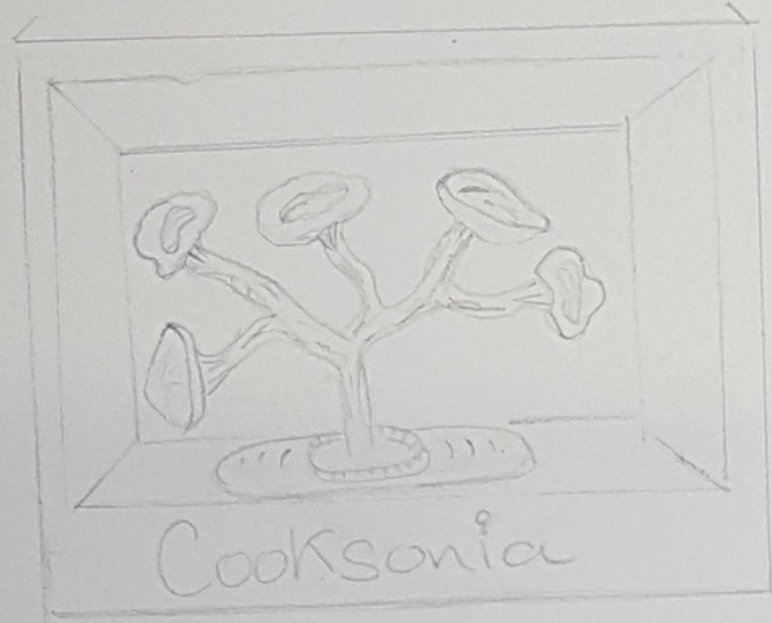

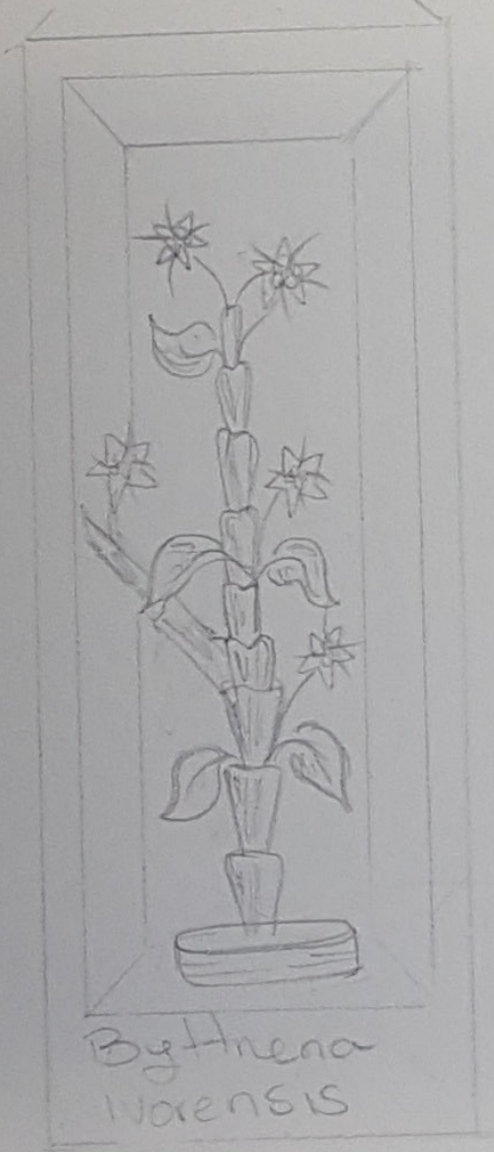

# References

Ends with a wall with  
a layer of a slaves.
