

Apd week 7

Documentation of work

At first, I worked in Maya for the models in this project. As I wanted to visualise a city skyline for this project I arranged that first.

I have worked for this sound visualizer in unity. I have worked with various kinds of audio and scripts in unity for this project. I took the Maya models to Unity to work on it further.

I used an audio spectrum script to analyse sound frequencies and one audio sync scale script that helped me scale the objects after analysing sound frequencies of various types of sound.

I have edited the videos using Adobe Premiere Pro and After Effects
