

## Statement of inquiry

How can "water" freely show various changes through two-dimensional animation and incorporate other natural elements.

### RATIONAL

I wanted to make a two-dimensional animation to explore the different forms of "water", which is very common and changeable. Water can freeze into ice and become solid, or become water vapour into gas. As we all know, the creative freedom of animation is very high, and animation can achieve anything, so I am thinking that combining the changeable "water" and animation should be able to create exciting works. However, I believe that the theme of "water" has been done by many masters, so I hope that in addition to "water", I can also add other natural elements to the animation, such as "fire" and "wind" and different natural elements context

### CONTEXT

This is some excellent animation about "water",

[https://youtu.be/xB24XL\\_laxc](https://youtu.be/xB24XL_laxc)

In this animation, water can become everything, which is what I want to explore, "water" is very changeable, so in my animation, I also hope "Water" can become anything.

Something can be connected to become another item through the water.

The sound of running water is also excellent; if it is combined with good music,

I will make an excellent two-dimensional animation

### METHODS

Preliminary preparation includes the shape deformation test of "water"

to select the items or characters you want to change the Story version. I think "water" changes into one thing and then into another entity. The connection process is essential, fluency is also essential, and it cannot be blunt.

### OUTCOMES

My final work is a two-dimensional animation in which "water" becomes everything, everything can become water, and in addition to water, natural elements such as "fire" and "wind" will also appear and change.

I think that many masters have done the theme of "water" change, so I hope that in addition to "water",

I can also add other natural elements to the animation, such as "fire" and "wind" and other natural elements, I believe this idea will be a good innovation for this genre.
